

Amendments to the Claims:

Listing of the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

1-16. (canceled).

17. (currently amended) A bathroom accessory comprising:

a mounting subassembly; and

a post; and

~~a functional member connected to said post;~~

wherein said mounting subassembly comprises a mounting bracket; and

wherein said post is connected to said mounting subassembly by alignment of said post with said mounting subassembly and movement of said post along said mounting subassembly solely in an axial direction until ~~a-an extended portion of a snap flange located on an outer surface of~~ said mounting bracket snaps into a recess formed through said post, ~~said extended portion of said snap flange being engageable from the exterior of~~ said post to release the connection of said post to said mounting bracket,

~~wherein said functional member is a towel bar, a towel ring or a paper holder.~~

18. (canceled).

19. (original) The bathroom accessory of claim 17, wherein said post includes a generally toroidal portion defined by an inner diameter and an outer diameter and a thickness therebetween, and said mounting bracket includes an axially extending body portion which is

generally toroidal and is defined by an inner diameter and an outer diameter and a thickness therebetween; wherein said inner diameter of said post is slightly larger than the outer diameter of said axially extending body portion of said mounting bracket to form a friction fit between the post and the mounting bracket.

20. (currently amended) The bathroom accessory of ~~claim 19~~ claim 17, wherein said mounting bracket further comprises an axially extending body portion and one or more ribs located on said axially extending body portion.

21-29. (canceled).

30. (new) The bathroom accessory of claim 17, wherein said mounting bracket includes an axially extending body portion,

wherein said snap flange is located on said axially extending body portion, and
wherein said snap flange includes a camming surface that engages an inner surface of
said post to flex said snap flange.

31. (new) The bathroom accessory of claim 17, further comprising a functional member connected to said post.

32. (new) The bathroom accessory of claim 31, wherein said functional member is a towel bar, a towel ring or a paper holder.

33. (new) A bathroom accessory comprising:

a mounting subassembly; and

a post,

wherein said mounting subassembly comprises a mounting bracket; and

wherein said post is connected to said mounting subassembly by alignment of said post with said mounting subassembly and sliding movement of an inner surface of said post along an outer surface of said mounting subassembly solely in an axial direction until a portion of a snap flange located on said mounting bracket snaps into a recess formed through said post, said snap flange being engageable from the exterior of said post to release the connection of said post to said mounting bracket.

34. (new) The bathroom accessory of claim 33, wherein said post includes a generally toroidal portion defined by an inner diameter and an outer diameter and a thickness therebetween, and said mounting bracket includes an axially extending body portion which is generally toroidal and is defined by an inner diameter and an outer diameter and a thickness therebetween; wherein said inner diameter of said post is slightly larger than the outer diameter of said axially extending body portion of said mounting bracket to form a friction fit between the post and the mounting bracket.

35. (new) The bathroom accessory of claim 33, wherein said mounting bracket further comprises an axially extending body portion and one or more ribs located on said axially extending body portion.

36. (new) The bathroom accessory of claim 33, wherein said mounting bracket includes an axially extending body portion,

wherein said snap flange is located on said axially extending body portion, and
wherein said snap flange includes a camming surface that engages said inner surface of
said post to flex said snap flange.

37. (new) The bathroom accessory of claim 33, further comprising a functional member
connected to said post.

38. (new) The bathroom accessory of claim 37, wherein said functional member is a towel bar, a
towel ring or a paper holder.

39. (new) A bathroom accessory mounting assembly comprising:
a mounting bracket which includes an axially extending body portion;
an accessory post that mounts on said axially extending body portion by sliding
movement of an inner surface of said accessory post along an outer surface of said axially
extending body portion;
wherein said mounting bracket includes a snap flange located on said axially extending
body portion, said snap flange including a camming surface that engages said inner surface of
said accessory post to flex said snap flange;

wherein said accessory post includes a recess extending therethrough for receiving a
portion of said snap flange when said accessory post is properly positioned on said mounting
bracket, receipt of said portion of said snap flange in said recess allowing said snap flange to
unflex, thereby facilitating secure attachment of said accessory post to said mounting bracket;
and

wherein, to release secure attachment of said accessory post to said mounting bracket, said snap flange can be engaged from the exterior of said accessory post to flex said portion of said snap flange out of said recess.

40. (new) The bathroom accessory mounting assembly of claim 39, further comprising a flange that mounts on said axially extending body portion of said mounting bracket.

41. (new) The bathroom accessory mounting assembly of claim 40, wherein said mounting bracket further comprises a retaining flange located along a periphery of said body portion for securing said flange to said mounting bracket.

42. (new) The bathroom accessory mounting assembly of claim 39, wherein said accessory post includes a generally toroidal portion defined by an inner diameter and an outer diameter and a thickness therebetween, wherein said axially extending body portion is generally toroidal and is defined by an inner diameter and an outer diameter and a thickness therebetween; wherein said inner diameter of said accessory post is slightly larger than the outer diameter of said axially extending body portion of said mounting bracket to form a friction fit between the accessory post and the mounting bracket.

43. (new) The bathroom accessory mounting assembly of claim 39, wherein said mounting bracket further comprises one or more ribs located on said axially extending body portion.

44. (new) The bathroom accessory mounting assembly of claim 39, wherein said snap flange includes a main portion that is integral to said body portion, said main portion formed in a cutout region of said body portion such as to provide a u-shaped cutout in said body portion.
